ZÜBLIN broadens its position as a nationwide construction logistics service provider

- **High demand: Ed. Züblin AG is now operating in the market with three regional construction logistics business units: North, Central and South**
- **ZÜBLIN Construction Logistics ensures the efficient planning and control of all processes related to large, complex construction sites**

Frankfurt, 18 August 2021 ZÜBLIN is responding to the increasing demand for construction logistics expertise throughout Germany by broadening its regional focus as a service provider in this field. With its three new construction logistics business units, North, Central and South, all under the roof of ZÜBLIN's Central Subdivision, the logistics team is putting itself into closer proximity to its customers and is thus responding to the growing demand on the market. From construction site roads to site containers, from power supply to loading zone management and sustainable waste disposal, ZÜBLIN Construction Logistics is the go-to specialist for the efficient organisation of all construction-related processes as well as the logistics planning and control of all activities associated with large, complex construction sites. At projects like Überseequartier in Hamburg, the FAIR particle accelerator facility in Darmstadt or the U5 metro line in Berlin, everything – human, material and machine resources – must be in the right place at the right time

[Here](#) you can find an example of how the ZÜBLIN Construction Logistics team ensures the smooth progress of construction work at the large-scale Terminal 3 project (expansion of Frankfurt Airport).

Stuttgart-based Ed. Züblin AG, with more than 13,000 employees and an annual output of around € 4 billion, is one of Germany's largest construction companies. Since its foundation in 1898, ZÜBLIN has been successfully realising challenging construction projects in Germany and abroad and today is the STRABAG Group's leading brand for building construction and civil engineering. The company's range of services covers all construction-related tasks – from complex turnkey construction, civil engineering and tunnelling to construction logistics, structural maintenance, ground engineering and timber or steel construction. In recent years, ZÜBLIN has been promoting the topics of digitalisation, LEAN.Construction and sustainability and – supported by the many years of experience of its Zentrale Technik competence centre – is also increasingly offering integrated design and construction from a single source as a general planner. When it comes to partnering, ZÜBLIN has set new standards with its teamconcept partnering model, which has proven its worth on the market for more than 25 years. Current construction projects of the company, a subsidiary of globally operating STRABAG SE, include the EDGE East Side Berlin high-rise project, the Rinsdorf and Rälsbach viaducts on the A45 motorway and the Boyneburg Tunnel on the A44. More information is available at www.zueblin.de.
